Jacksonville Florida based ACI Communications Corp. was awarded a contract to design install and support a call center utilizing the Mitel 5000 communications system for RISE Health. The company employees over 100 people in Jacksonville. Rise Health provides technology-enabled clinical support for primary care physicians. When a patient calls a medical center to schedule an appointment with his or her primary physician, a Rise employee answers the call. The employee types the patients name into its patient management platform which is integrated with public content from Medline Plus Connect, a service of the National Library of Medicine, National Institute of Health and the US Department of Health and Human Services. The result of such research is the patients entire medical history. We hope to turn it into a Billion dollar company, said Nicole Bradberry, Chief Technology Officer. The company landed its first customer Boston Medical Center last December. ACI Communications Corp designs markets and supports a full line of voice and data communication networks utilizing the Mitel Platform.
